ABSTRACT

A survey of the amount and utilization of non-residential state university campus space available for potential higher education classroom usage is presented for all of the public colleges and universities in Illinois. The survey categorizes the space--(1) by an inventory of net assignable space, and (2) by the utilization of net assignable space for classrooms, instructional laboratories, other teaching facilities, offices, library, gymnasium, student union, bookstore, hospital and health services, auditorium, museum, and theater. A room period usage inventory is given for classrooms and instructional laboratories. Recommendations and suggested techniques are given for achieving utilization standards. The appendix includes tables of data collected by the survey from each of the colleges and universities. (HH)

STATE-WIDE SPACE SURVEY

A Survey of the Amount and Utilization of Nonresidential Space Available for Higher Education in Illinois

Published November 1966

FOREWORD

The preparation of data contained in this report on physical facilities has required considerable effort on the part of participating institutions. The staff was gratified at the response from private and public institutions. A large majority of the institutions in the state invested staff time, energy, and thought in obtaining and assembling the basic material for this study. This cooperation was sincerely appreciated, and it is hoped that the final report and accompanying charts will prove helpful to each institution.

Special acknowledgment and appreciation must be expressed to the University of Illinois which, through the Director of the Central Office on the Use of Space, Mr. Harlan D. Bareither, and members of his staff, particularly Mr. John R. Cain and Mr. Jerry Hess as well as Mr. Walter W. Williams and Mrs. Nancy Moser of the University Statistical Service Unit, gave direction to the time-consuming task of reducing the quantities of data to manageable proportion and form.

The staff also wishes to express special acknowledgment and appreciation to members of the Technical Advisory Committee for their valuable advice and consultation during all phases of the study. The professional guidance rendered by the committee made an important contribution to the completion of the study. Members of the Technical Advisory Committee are:

Harlan D. Bareither
Director, Central Office
  on the Use of Space
University of Illinois

Rob R. Beldon
Chief Broadcasting Engineer

KEY

The following key is used for the names of the public universities in the tables and figures of this report.

EIU - Eastern Illinois University, Charleston

ISU - Illinois State University, Normal

NIU - Northern Illinois University, DeKalb

SIU - C - Southern Illinois University, Carbondale

SIU - E - Southern Illinois University, Edwardsville

U of I - UC - University of Illinois, Urbana-Champaign

U of I - CC - University of Illinois, Chicago Circle

WIU - Western Illinois University, Macomb

ITCC - N - Illinois Teachers College Chicago - North

ITCC - S - Illinois Teachers College Chicago - South

INTRODUCTION

A Word of Caution

One of the more unfortunate aspects of the increased emphasis currently placed on the utilization of physical facilities is the confusion which results when utilization data are misinterpreted. In many cases efforts are made to compare utilization data reported by institutions which are vastly different in terms of educational program and purpose. It is also common to find attempted comparisons between data which are based upon different units of measurement. Too often, attempts are made to interpret utilization data without regard to the many limitations inherent in any study of physical facilities and without regard to the predetermined scope of the particular study involved.

In an effort to reduce such confusion insofar as the "State-wide Space Survey" is concerned, certain information regarding the scope of the project and its more obvious limitations will be presented at the outset. In addition, certain premises will be stated. These premises are quite similar in nature to many of the findings obtained through utilization studies conducted in the past. They are included in the Introduction for the purpose of establishing the framework within which data are to be presented in the various sections of the report. The following basic premises should underlie the consideration and/or interpretation of data contained in the "State-Wide Space Survey."

1. Optimum utilization of physical facilities varies according to the nature of the activity which takes place within the facility. Generally speaking the instructional, research, and service functions of an institution do not require similar amounts of space.

2. Optimum utilization of instructional facilities varies according to the nature of the instruction which takes place within the facility. Instructional activities based upon differing theories of learning require different amounts of space. Instruction in certain disciplines requires greater amounts of space than instruction in others.

3. Wide diversity of educational programs exists among institutions of higher education in Illinois. As the optimum level of utilization of physical facilities varies with the educational program, substantial variation in the level of utilization reported by institutions of higher education is to be anticipated.

4. Extreme care must be taken when studying the utilization of physical facilities. The interpretation of utilization data is a process involving many variables and combinations of variables. It is often difficult if not impossible to perceive all factors which contribute to overall utilization. Therefore, extreme caution must be exercised when making generalizations based upon utilization data.

5. The efficient utilization of physical facilities is a means to an end. It is never an end in and of itself. Only by implementing the achievement of stated institutional purposes and educational objectives can the utilization of physical facilities become a valid goal.

For reasons apparent in the previous discussion, utilization standards should be firmly grounded in the purposes, programs, and educational philosophy of the institution. It is quite possible to change the nature of an institution by changing the manner in which it utilizes physical facilities. Conversely, officials of the institution should be aware of the extent to which physical facilities are being utilized and of the cost of such utilization in terms of space requirements. The level of utilization achieved by an institution should reflect basic policy decisions on the part of the administration and the governing board.

There is little doubt that time and effort invested in the careful study of ways and means to utilize more effectively physical facilities can result in increased enrollment capacity. To be most effective such study should be directed toward ascertaining the level of utilization which is appropriate for a given institution with stated purposes, programs, admissions policies, and instructional techniques. The task is extremely difficult and complex. It is hoped that data contained in this study, when applied with a full realization of the limitations imposed by scope and methodology, will serve as a useful tool for institutions in their efforts to achieve improved utilization of physical facilities.

Scope of the Study

The "State-Wide Space Survey" contains data relating to the third week of the 1965 fall term and includes data pertaining to all nonresidential space on the various campuses of participating institutions. Residential space, as well as space in agricultural field buildings, airport buildings, and buildings of the medical, dental, and pharmaceutical colleges, is not included in the study.

Institutions of higher education were encouraged to participate in the interest of improved institutional planning and of systematic planning and coordination for the state as a whole. Certain institutions of a highly specialized nature were omitted from the study. Responses were not requested from institutions of theology and religious education, private fine arts institutions, private medical colleges, private law colleges, and proprietary schools. Responses were requested from institutions enrolling approximately 94 per cent of the students attending institutions of higher education in the State of Illinois during the 1965 fall term.

Of the ninety-three institutions requested to participate, eighty-five responded by submitting data on the forms provided by the Board of Higher Education. Thus, the study includes data submitted by a substantial majority of the institutions of higher education in Illinois.

"The State-Wide Space Survey" is intended to serve three basic purposes: (1) to inventory the nonresidential space currently available for higher education in Illinois; (2) to measure the extent to which available nonresidential space is currently utilized by institutions of higher education in Illinois; and (3) to make these data available for institutional planning and for systematic planning and coordination for the state as a whole.

The first section of this report presents data relating to the net assignable nonresidential space at each of the eighty-five institutions that submitted a response. Information is presented on the total net assignable square feet of nonresidential space and a permanency rating given for that space. The net assignable space is categorized by function into classrooms, instructional laboratories, and other teaching facilities, office, library and other.

The second section presents data relating to the utilization of all scheduled instructional areas and the occupancy of office space.

The third section presents information on the progress made to date by the public institutions toward achieving the interim utilization standards recommended in 1963 by Committee I of the Master Plan study.

The fourth section presents certain recommendations of the staff relating to methods of improving the utilization of physical facilities in institutions of higher education and continuing research in this area.

Limitations of the Study

As is the case in all studies of the utilization of physical facilities, the "State-Wide Space Survey" contains certain technical and general limitations. Data presented should be reviewed with these limitations clearly in mind. The technical limitations will be discussed first.

The scope of the project has been mentioned previously. Residential space is not included in the study. The treatment of part-time or shared space constitutes a problem. If included, data relating to such space tend to distort mean and median values. For the purposes of the "State-Wide Space Survey," part-time space, as defined in the instructions, is placed on a separate schedule. Schedule A5 of the Appendix deals exclusively with part-time space. Data for institutions with significant amounts of part-time space are recorded in a separate category titled "Institutions with Shared Facilities" and given at the end of each schedule. They are not included in the schedule totals. This approach to the treatment of part-time space is obviously not a perfect solution to the problem.

However, as the bulk of such space in Illinois is space shared by junior colleges and secondary schools, it appears more profitable to study the utilization of part-time space separately than to incorporate data relating to such space into the general analysis.

In an effort to obtain the greatest level of participation possible, certain data were made optional while other data were mandatory. The use of such optional data imposes certain technical limitations upon the processing and reporting of state-wide data.

The first such limitation is reflected in the specialized use of certain terms. All data were processed, tabulated, and summarized through the use of computers. Certain mathematical computations were not feasible as a result of the inclusion of responses containing varying amounts of data. It is, therefore, necessary to refer to the definition of terms before reviewing the data which are presented in later sections of this report. An example of such specialized use of terms may be found in the definition of the mean. When used in the "State-Wide Space Survey," the term "mean" refers to the sum of the responses obtained on a given item divided by the number of institutions reporting some quantity other than zero for that particular item. Institutions that failed to respond to a given item or reported zero for that item are not included in the computation of the mean. Thus, the mean is essentially an arithmetic average computed for the institutions that reported space or utilization for a particular item. Although this figure is useful in the study of space utilization, it is not consistent with the traditional computation of the arithmetic mean.

Another effect of the inclusion of optional data will be found in the relationship which exists between certain columns within a table and the relationship which exists between certain tables. Because some responses included optional data and others did not, it is not possible to "reconcile" or balance groups of columns within certain tables. For the same reason, certain tables relating to different topics (permanency ratings, inventory, etc.) will not show identical amounts of available net assignable space.

A final technical limitation relating to the methodology employed for the study should be mentioned. Although definitions of terms and instructions were distributed to all participants, the actual assignment of facilities to a given functional category was made by employees of the various institutions. Such assignment represents an area within which a certain amount of inconsistency will be found. Differences resulting from factors involving program, level of student, etc. are, of course, valid factors affecting the assignment of space to a functional category and do not represent a problem. However, differences in viewpoint, approach, and interpretation of instructions result in a lack of continuity in the assignment of certain types of space to given functional categories and in the reporting of utilization data. Persons interpreting data contained in this report should realize that they were compiled by many persons, some experienced and others inexperienced in the study of space utilization, and are subject to a certain amount of human error.

In addition to the technical limitations mentioned above, certain general limitations exist which should be kept in mind when reviewing most space utilization studies. Although time will not be taken to discuss each of these general limitations in detail, they warrant brief consideration before the presentation of data.

Additional research is badly needed in the area of specialized instructional space. To date some question exists as to the best unit of measure which may be applied to the utilization of libraries, instructional material centers, museums, exhibit halls, etc. The increasing trend toward individual study with corresponding emphasis on the use of these areas intensifies the need for improved methods of measuring their utilization.

A second general limitation is the application of specific units of measure such as capacity/enrollment ratio, room period usage, student station use, etc. to all facets of the program without regard to level of student, discipline, and/or teaching techniques. Much evidence exists which would indicate these factors have a significant effect upon the amount of space required.

The relationship which exists between the instructional, research, and service functions of an institution of higher education also represents a factor to be considered. Many institutions perform two or three of these functions. Although general agreement seems to exist that the three functions do not require similar amounts of space, little evidence is available regarding the manner in which their space needs differ. Therefore, care should be taken when generalizing from data relating to one function into areas involving other functions.

The treatment of noncredit instructional activity represents a further problem. Some educators take the view that such instruction should not be included. Others feel that, where it has been formally accepted as an institutional purpose, such instruction should be considered. They contend that emerging social and economic patterns are producing an increasing amount of instruction of this type. Survey forms for this study included a schedule upon which institutions could submit data relating to the use of physical facilities for noncredit instructional activity. However, due to the very limited response these data do not appear in this report.

Definition of Terms

Terms used in the "State-Wide Space Survey" are defined below:

Mean: The quotient obtained by dividing the sum of the responses received on a given item by the number of institutions reporting some quantity other than zero for that particular item. Institutions that did not submit data or that reported zero for a particular item are not included in the computation of the mean for that item. The "mean value" is used to give an average of a certain group of institutions and serves to give each institution equal weight.

Weighted mean: The sum of a column of figures divided by the sum of another column of figures. The weighted mean value is used to show the effect of a group of institutions as an entity. The weighted mean takes into account not merely the number of units to be averaged, but also makes allowance for the value of each unit.

Grand mean: Obtained in the same manner as the mean except that it includes all of the institutions that submitted data.

Grand weighted mean: Obtained in the same manner as the weighted mean except that it includes all of the institutions that submitted data.

Note: Many of the following definitions, with minor revisions, are taken from "Financial Assistance for Construction of Higher Education Facilities -- Regulations Higher Education Facilities Act of 1963" as distributed by the United States Department of Health, Education, and Welfare (OE 51008).

Instructional and library facilities: All rooms or groups of rooms used regularly for instruction of students, for faculty offices, or for library purposes. A room intended and equipped for any of the purposes listed should be counted in the appropriate category, regardless of the building (e.g., administrative building, library building, or field house) in which it is located. Instructional and library facilities are subdivided into the following categories: (1) general classrooms; (2) instructional laboratories; (3) other teaching facilities; (4) service areas for general classrooms, instructional laboratories, and other teaching facilities; (5) library facilities; and (6) faculty offices.

General classrooms (includes lecture rooms and seminar rooms): All instructional rooms used or intended and equipped to be used chiefly for lectures, recitations, and seminar types of class meetings, regardless of the size of the rooms. The seating area of an auditorium or theater, if regularly used for scheduled class meetings, should be classified and counted as a general purpose lecture room.

Instructional laboratories (teaching laboratories or shops): All instructional rooms equipped for special purposes such as chemistry experiments, language practice, food preparation and service in home economics, shopwork in industrial arts, painting, etc.

Note: The terms instructional laboratory and teaching laboratory are considered synonymous for purposes of this report and are used interchangeably. In general, the term instructional laboratory is used in the narrative sections with teaching laboratory being used in figure and table headings.

Other teaching facilities: All other rooms and areas regularly used or intended for scheduled class meetings or individual instruction, such as: music practice rooms (for individual practice) and music studios (where an instructor's office serves also as a studio, the room should be counted under "faculty offices"); playing floors; wrestling and boxing rooms; indoor swimming pools; and indoor track and field areas used regularly for instructional purposes (including drill fields).

Service areas for general classrooms, instructional laboratories, and other teaching facilities: All service areas which adjoin and are used in conjunction with any general classrooms, instructional laboratories or shops, or other teaching facilities. Examples of service areas are: closets in general classrooms or instructional laboratories or shops; rooms adjoining and used in conjunction with instructional laboratories or shops, such as a balance room, storeroom, supply room, darkroom, or projection room; seating areas, locker and shower rooms, and equipment issue and storage rooms located in a gymnasium; instrument storage areas adjoining a music studio; etc.

Library facilities: Rooms or groups of rooms used for the collection, storage, circulation, and use of books, periodicals, manuscripts, and other reading and reference materials including the general library, departmental libraries, and rooms for special collections of documents, rooms for storage of films, records, and other audio-visual equipment and materials, library reading and listening rooms, acquisition rooms, cataloguing room, document reproduction room, circulation and reference desks, and other similar library service area. Library science laboratories and lecture classrooms located in a library building are to be counted as either general classrooms or instructional laboratories and shops.

Faculty offices: All rooms or groups of rooms (departmental and below, excluding offices for research personnel as subsequently defined) with office equipment, which are assigned to one or more faculty members for the performance of administrative, clerical, or faculty duties other than the meeting of classes. A studio room in a department of music or fine arts, assigned to one or more faculty members for their own work, even though occasionally used for a student lesson, should be counted as a faculty office. Service areas for faculty offices (e.g., waiting rooms, office files and supply rooms, interconnecting corridors within a suite of offices, private toilets, and clothes closets) should be counted together with the offices themselves.

Administrative offices: All rooms or groups of rooms (above the departmental level) with office equipment, other than those meeting the definition of "faculty offices" which are used for the performance of administrative or clerical duties related to the administration of the educational or research programs of an institution of higher education. Service area for administrative facilities (e.g., waiting rooms, office files and supply rooms, interconnecting corridors within a suite of offices, private toilets, and clothes closets) should be counted as part of such facilities.

Offices assigned to research personnel: Rooms or groups of rooms with office equipment, which are assigned to one or more faculty members for the performance of duties evolving exclusively from the research program of the institution. Service areas for offices assigned to research personnel (e.g., waiting rooms, office files and supply rooms, interconnecting corridors within a suite of offices, private toilets, and clothes closets) should be counted together with the offices themselves.

Research facilities: Rooms or groups of rooms which provide research facilities and are not made available for regular class meetings. A room that serves both as an office and a research laboratory should be counted under research facilities. Service areas which adjoin and are used in conjunction with research facilities should be counted as part of such facilities.

Other instruction-related facilities: All types of rooms or facilities not included in one of the above categories, which clearly are related to the instructional or research programs of an institution of higher education, and are used for specific functional purposes such as a control room or studio used for television or programed instruction, or a central computer facility which is used primarily for instructional purposes, a museum or exhibition room, a conference room, a greenhouse, or an animal quarters separated from laboratory areas. Service areas for such facility should be counted together with the facility itself.

Student study areas (all rooms or areas used as student study rooms including adjoining toilet or locker facilities) are also considered as other instruction-related facilities. It should be noted, however, that library facilities are included and defined elsewhere in the inventory.

Laboratory school: A school that is under the direct control or closely associated with a teacher preparation institution, whose facilities may be used for demonstration, participation, experimentation, and practice teaching. This space will be listed under "miscellaneous space."

Part-time space: Any space not available to and/or under the control of the institution 100 per cent of the time. Space leased to other agencies by an institution, of its own volition, should not be included in "part-time space."

Miscellaneous space: All net assignable nonresidential areas not included in primary classifications. Examples of areas which should be included in this category are: lounge space, laboratory school space, space in process of being remodeled, and warehouse space.

Capacity/enrollment ratio: The ratio of square feet of assignable area of instructional and library facilities to the total student clock-hour enrollment divided by one hundred.

Note: The remaining definitions are taken, with minor revisions, from Chapter 3 of "Studies of Space Utilization in Colleges and Universities," 1957, by John Dale Russell and James I. Doi.

Class: A regularly scheduled academic unit of one or more student formally organized for instruction in a specific course under the supervision of an instructor. A student or group of students who may meet informally or irregularly for discussion with an instructor would not be considered a "class."

Period: As used in space utilization studies, a period is a unit of time approximately one hour. Generally in institutions of higher education, a class period consists of fifty minutes of instruction, with an allowance of ten minutes for changing classes. A class meeting for two consecutive hours should be considered as two class periods in a space utilization study.

Station: A student station is a chair, seat, laboratory desk, or some other facility necessary to accommodate one student during an instructional period. An office station generally consists of a desk and a chair and other office equipment required to accommodate one faculty or staff member.

Schedule week: The days of the week and the hours during which regularly scheduled classes are held. Institutions differ considerably in their weekly schedules, particularly with respect to the total number of hours. In space utilization studies, when dealing with rates of possible utilization, it is essential to identify the number of hours on a weekly basis that has been used to compute the rates. The schedule week used for this report is from 7 A.M. to 10 P.M. Monday through Friday and 7 A.M. to 12 noon Saturday.

Room period use: The number of hours that a room (or the average for a group of rooms) is occupied by a class. A room is considered to be in use whenever a class meeting is held in it, regardless of the size of the class.

PRINCIPAL FINDINGS RELATIVE TO PUBLIC UNIVERSITIES[1]

Existing Space

1. The public universities have 10,534,531 net assignable square feet of nonresidential building space. They classify 74.8 per cent of their nonresidential space as a permanent facility that is a part of the major campus plan and will require only normal maintenance.
2. The public universities have 1,033,665 net assignable square feet of nonresidential space which will require extensive remodeling in the next ten years (above $10.00 per square foot).
3. The public universities report 972,270 net assignable square feet of nonresidential space that will be retained less than ten years.

Space by Function

1. Net nonresidential space is reported in eight classifications. For the public universities the net square feet per student range from 67.2 to 163.1. The

---

[1] Refer to the narrative and Appendix for data relative to all institutions.

mean percentage of space allocated to classrooms is 10.7; to instructional laboratories, 13.4; to research, 4.5.

2. The percentage of space allocated to libraries by the public universities ranges from 5.8 to 16.3 with a mean of 9.1 per cent.

3. The percentage of space assigned to offices by the public universities varies from 9.2 to 31.4, with a mean of 17.3 per cent. "Other" space has a mean of 26.0 per cent ("other" refers to space allocated to student unions, auditoriums, health service, etc.).

Utilization of Space

Classrooms

1. The public universities have a mean of 15.7 and a weighted mean of 14.7 square feet per station and a mean and weighted mean of 10.0 and 9.9 square feet per student respectively.

2. The average class size in the public universities ranges from 23.3 to 37.3 students.

3. The weighted mean room period usage per week from 7 A.M. to 5 P.M. is 26.8 and from 5 to 10 P.M. is 2.9, for a total of 29.7 at the public universities. The mean room period usage per week from 7 A.M. to 5 P.M. is 26.3 and from 5 to 10 P.M. is 4.8, for a total of 31.1 at the public universities.

4. The weighted mean student hours per week per station in classrooms for the public universities from 7 A.M. to 5 P.M. is 15.3 and from 5 to 10 P.M. is 1.4, for a total of 16.7.

5. The weighted mean per cent of student stations in use from 7 A.M. to 5 P.M. for the public universities is 57.3 and 5 to 10 P.M. is 47.7, for a total of 56.4.

6. The weighted mean for net assignable square feet per 100 hours of occupancy from 7 A.M. to 10 P.M. at the public universities is 88.

Instructional Laboratories

1. The public universities have a weighted mean of 69.7 net assignable square feet per station and 13.9

net assignable square feet per student.

2. The average teaching laboratory class size in the public universities ranges from 17.12 to 22.09 students with a mean of 19.8.

3. The weighted mean room period usage per week from 7 A.M. to 5 P.M. is 17.8, and from 5 to 10 P.M. is 1.1, for a total of 18.9 at the public universities.

4. The weighted mean student hours per week per station in instructional laboratories for the state universities from 7 A.M. to 5 P.M. is 14.3 and from 5 to 10 P.M. is .8, for a total of 15.1.

5. The weighted mean per cent of student stations in use from 7 A.M. to 5 P.M. for the public universities is 80.4 and from 5 to 10 P.M. is 70.9, for a total of 79.9.

6. The weighted mean for net square feet per 100 hours of occupancy for the public universities is 461.

Other Teaching Facilities

1. The number of square feet per station devoted to other teaching facilities ranges from 22.8 to 370.0 square feet at the public universities, with a weighted mean of 151.6 square feet per station and a weighted mean of 10.3 square feet per student.

2. The number of square feet per student devoted to other teaching facilities by the public universities ranges from 2.7 to 15.3 with a weighted mean of 10.3.

3. The weighted mean for net assignable square feet per 100 hours of occupancy from 7 A.M. to 10 P.M. for the public universities is 835.

Office Space

1. Office space comprises 18.3 per cent of all nonresidential space in the public universities.

2. Office space, including conference, file, and active storage space, ranges from 110.3 to 148.9, with a weighted mean of 129.6 net assignable square feet per full-time equivalent occupant at the public universities.

3. Office space, including conference rooms, files, and active storage space, at the public universities

occupied by faculty personnel only has a weighted mean of 115.8 net assignable square feet per full-time equivalent occupant.

4. Office space, including conference rooms, files, and active storage space, at the public universities occupied by personnel assigned to research only has a weighted mean of 137.4 net assignable square feet per full-time equivalent occupant.

5. Office space, including conference rooms, files, and active storage space, at the public universities occupied by administrative personnel only has a weighted mean of 151.3 net assignable square feet per full-time equivalent occupant.

Libraries

Libraries occupy 9.1 per cent of the total nonresidential space at the public universities.

Capacity/Enrollment Ratio

The capacity/enrollment ratio, based upon scheduled instruction only, ranges from 263.2 to 428.7, with a weighted mean of 345.4 for public universities.

Service and Maintenance Space -- Buildings and Grounds

An average of 4.9 per cent of the total net assignable nonresidential space is devoted to these uses by the public universities.

SECTION I

INVENTORY OF NET ASSIGNABLE NONRESIDENTIAL SPACE

Data relating to the distribution of net assignable nonresidential space by permanency rating and functional category are presented here for the public universities and teachers colleges. Summary data are not presented in table form for other institutions due to the fact that some responses received from nonpublic institutions did not contain optional data. Thus, group totals would be distorted. However, references to appropriate schedules of the Appendix are included for each group of data discussed. These schedules contain more detailed information for all institutions that responded to appropriate sections of the study.

Table I presents data relating to the inventory of net assignable nonresidential space at the public universities and teachers colleges. Data relative to permanency rating are in terms of square feet and percentage of total nonresidential space. More detailed data are presented in Schedules A1 and A2 of the Appendix for all institutions.

Table I categorizes the total net assignable nonresidential space by permanency rating according to the following schedule:

A1. A permanent facility that is part of the major campus plan and will require only normal maintenance.
A2. A permanent facility that is part of the major campus plan but will require extensive remodeling in the next ten years(above $10.00 per square foot).
A3. A shared or leased facility that is part of the major campus plan.
A4. A facility that is part of the major campus plan but does not fit preceding categories.
B1. A facility, institutionally owned, not in the major campus plan that will be retained for ten years although it may be on a future building site.
B2. A facility, institutionally owned, which is planned to be retained for less than ten years.
B3. A shared or leased facility not in the major campus plan.

It will be noted that 74.8 per cent of the public university space and 43.0 per cent of the public teachers college space is in the A1 category. Probably the most significant permanency ratings are the A2 and B2 categories. The A2 category indicates space that will require extensive remodeling (above $10.00 per square

TABLE I

Distribution of Net Assignable Nonresidential Building Space by Total Square Feet and Percentage of Permanency Rating

Institution	Total Net Assignable Sq. Ft.	A-1	A-2	A-3	A-4	B-1	B-2	B-3
EIU	478,261	436,199(91.2)[a]	22,222(4.6)				19,840(4.1)

ITCC - S	95,874			95,874(100.0)				
Total	168,254	72,380(43.0)		95,874(57.0)				

a - Parenthetical values are percentages.

foot) within the next ten years. In category A2, the public universities report 1,033,655 square feet and the public teachers colleges indicate zero. It should be noted that Illinois Teachers College South assigned all existing nonresidential space to the A3 (shared or leased facilities) category. The B2 category indicates space that will not be retained beyond ten years. The total B2 space is 972,270 square feet for the public universities and zero for the public teachers colleges.

Tables II and III give data on net assignable nonresidential space by function for all public universities and teachers colleges as well as totals by type of institution. More detailed data are presented in Schedules A3 and A4 of the Appendix for all institutions. The classification by function includes space that is allocated to: (1) classrooms including service to classrooms; (2) teaching laboratories including service to teaching laboratories; (3) other teaching facilities including service to other teaching facilities; (4) offices, including conference, storage, and files; (5) library; (6) research; (7) laboratory schools; and (8) other space. The "other" category may be best described as all nonresidential space except that contained in the seven specified categories. In some institutions this includes exhibit and museum space, warehouse space, athletic association space, publishing company space, etc.

Table II gives the total net assignable square footage by function, and Table III gives the percentage of building space allocated by function. The total space in net assignable square feet for the public universities is 10,513,574, and the range is from 67.2 to 163.1 net assignable square feet per student. For the public teachers colleges, the total space is 207,434 square feet. The two public teachers colleges report 19.5 and 25.2 net assignable square feet per student. More detailed data for all institutions are presented in Schedule A3 of the Appendix.

Data on the per cent of building space allocated to the various functions at the public universities indicate a range from 7.0 to 15.2 per cent, with a mean of 10.7 per cent for classooms. If classrooms,

WIU	10.3	23.0	13.3	9.2	6.1	.8	10.4	26.8
Mean	10.7	13.4	10.6	17.3	9.1	4.5	11.3	26.0
ITCC - N	30.0	10.8	17.1	20.6	11.2			50.5
ITCC - S	24.2	14.4	20.4	22.7	16.8			12.0
Mean	27.1	12.6	18.8	21.7	14.0			31.3
Mean for								
Public less than four year Colleges	23.6	8.2	10.2	40.2	8.3			47.4
Nonpublic Universities	16.2	10.9	6.9	16.2	9.1	6.8	10.0	34.8
Nonpublic four year Colleges	18.4	14.8	12.2	14.0	12.8	2.2	30.9	47.5
Nonpublic less than four year Colleges	18.6	10.6	12.0	10.3	8.4			39.3

instructional laboratories, and other teaching facilities are combined, the range is from 22.0 to 46.6 per cent, with a mean of 34.7 per cent. The figures are 57.9 and 59.0 per cent for the public teachers colleges. The sum of these three functions tends to be higher in institutions that do not have a large research program; as the research program becomes larger, the percentage of space assigned to classrooms, instructional laboratories, and other teaching facilities becomes smaller. The percentage of space allocated to research in the public universities varies from .3 to 21.1 per cent, with a mean of 4.5 per cent. If the classroom, laboratory, other teaching facilities, and research space are added together, the percentage of space devoted to these uses by the public teachers colleges and universities is as follows:

EIU	41.6
ISU	39.0
NIU	43.2
SIU - C	32.6
SIU - E	22.3
U of I - UC	46.1
U of I - CC	37.3
WIU	47.4
ITCC - N	57.9
ITCC - S	59.0

The percentage of space allocated to libraries by the public universities ranges from 5.8 to 16.3 per cent, with a mean of 9.1 per cent. The two public teachers colleges report 11.2 and 16.8 per cent. Space assigned to offices in the public universities varies from 9.2 to 31.4 per cent, with a mean of 17.3 per cent. The two public teachers colleges report 20.6 and 22.7 per cent. The mean for "other" space is 26.0 per cent for the public universities and 31.3 per cent for the two public teachers colleges. More complete information for all institutions is presented in Schedule A4 of the Appendix.

SECTION II

UTILIZATION OF NET ASSIGNABLE NONRESIDENTIAL SPACE

Classroom Utilization

Table IV gives a summary of the total amount of space allocated to classrooms, including service areas, at each of the public universities and teachers colleges, as well as the mean values for square feet per station and square feet per student for each type of institution. Complete information for all institutions is given in Schedule C1 of the Appendix. The total student clock-hour usage per week is reported for time periods of 7 A.M. to 5 P.M., 5 to 10 P.M., and 7 A.M. to 10 P.M. This division was made to provide a common daytime basis for comparison of data and to indicate the degree of evening usage in all of the institutions. Data on the square feet per station indicate a range of 12.4 to 19.8 at the public universities, with a mean of 15.7 and a weighted mean of 14.7. The grand mean for all participating institutions is 16.3. This is comparable to the planning figure of 15 square feet per station that is commonly used for classrooms.

Figure 1 gives the average room period usage per week of classrooms for the period 7 A.M. to 5 P.M., Monday through Friday, and 7 A.M. to 12 noon on Saturday. (This usage will be referred to as 7 A.M. to 5 P.M. usage and represents a fifty-five hour week.) Also included are the average room period usage from 5 to 10 P.M. (possible twenty-five hours) and combined usage of the entire scheduled week. More complete information for all institutions is given in Schedule C2 of the Appendix.

The evening scheduling at the public universities varies from zero to 16.4. The data indicate that Northern Illinois University and Southern Illinois University (Carbondale) schedule their classroom facilities in the evening to an intensity of 5.4 and 5.7 hours per week respectively. This indicates that it is possible to schedule evening classes at residential institutions. It should be noted that the weighted

TABLE IV

Summary of Classroom Data

Institution	Net Assignable Sq. Ft. Incl.Serv.	Student Occupancy 7 A.M. - 5 P.M.	Student Occupancy 5 P.M. - 10 P.M.	Total Student Occupancy	Net Assignable Sq. Ft. Per Station	Net Assignable Sq. Ft. Per Student

Nonpub. Univ.		17.1	6.1	23.2
Nonpub. 4-Yr. Col.		17.8	2.0	19.8
Nonpub. Less Than 4-Yr. Col.		18.9	1.2	20.1
Mean, Grand		19.7	3.8	23.5

mean for evening scheduling in the public universities is lower than the corresponding figure reported in 1962 in connection with Committee I of the Master Plan study.

This scheduling of evening classes, however, does not necessarily result in an increase in the total utilization of classrooms. Total room period usage, 7 A.M. to 10 P.M., is usually a more valid measure of the extent to which classrooms are being scheduled efficiently than either day or evening scheduling. Data relating to total room period usage give a range of 25.9 to 38.3 at the public universities, with a mean and weighted mean of 31.1 and 29.7 respectively. The two public teachers colleges report 35.1 and 39.4.

Figure 2 gives the average number of student hours per week per station in classrooms. These data can be clearly influenced by the manner in which the number of stations per classroom is reported. In some cases the data supplied indicate that a classroom having a listed capacity of twenty-five sometimes has as many as thirty-five students scheduled in the room. If this occurred to a great extent, the data in Figure 2 would appear to be quite high. Another interpretation of this schedule is that if the number of stations represented is assumed to be correct, the classrooms are too large for the size of the classes being taught in them.

Figure 3 is a combination of both Figures 1 and 2 and gives the per cent of student stations in use when the classrooms are in use. Data are provided for 7 A.M. to 5 P.M., 5 to 10 P.M., and 7 A.M. to 10 P.M. The practice of assigning more students to a class than the stated capacity of the classroom in which it meets also distorts the data in Figure 3. If it occurred frequently, the percentage obtained would be high (sometimes over 100 per cent). More detailed information for all institutions is given in Schedule C4 of the Appendix. The data indicate that it is possible to utilize 80 per cent of the stations when the room is in use. However, with a mean of 59.1 per cent for the public universities and a grand mean for all institutions of 57 per cent, the 80 per cent value appears to be a higher planning figure than can normally be achieved and may be undesirable for many institutions.

Figure 1 shows the degree to which classrooms were scheduled for available time during the week, and Figures 2 and 3 indicate how well the rooms were utilized when in use. Table V gives the total number of square feet of net assignable floor space per 100 hours per week of student occupancy for all classrooms and a breakdown by various sizes of classrooms. Figure 4 gives, in graphic form, the same information as Table V for all classrooms. It should be noted that a low value indicates high utilization. The data in Table V and Figure 4 give a good index of the classroom scheduling and utilization in one number. For example, a room having 600 square feet of floor area scheduled 30 hours per week with an average class size of 20 would yield the result of 100 square feet per 100 hours of student occupancy. However, if there were two rooms with an area of 600 square feet and one was equipped with 30 stations and the other with 40 stations, the data in Figures 1, 2, 3, and 4 and Table V would be presented as follows:

	Room	A	B
	Area Square Feet	600	600
	Number of Stations	30	40
	Average Class Size	20	20
Figure 1 -	Room Periods Per Week	30	30
Figure 2 -	Student Hours Per Station	20	15
Figure 3 -	Per Cent of Stations in Use When Room Is in Use	67	50
Figure 4 -	Square Feet of Assignable Floor Space Per 100 Hours Per Week of Student Occupancy	100	100

The above tabulation shows the manner in which Figures 2 and 3 may be influenced by the number of stations in a room, whereas the data in Figures 1 and 4 give the same values in both cases. Furthermore, the value of assignable floor space per 100 hours of student occupancy is very useful when projecting the future classroom space requirements for institutions if the number of student clock-hours in classrooms is known. The weighted mean for the public universities is 88 square feet per 100

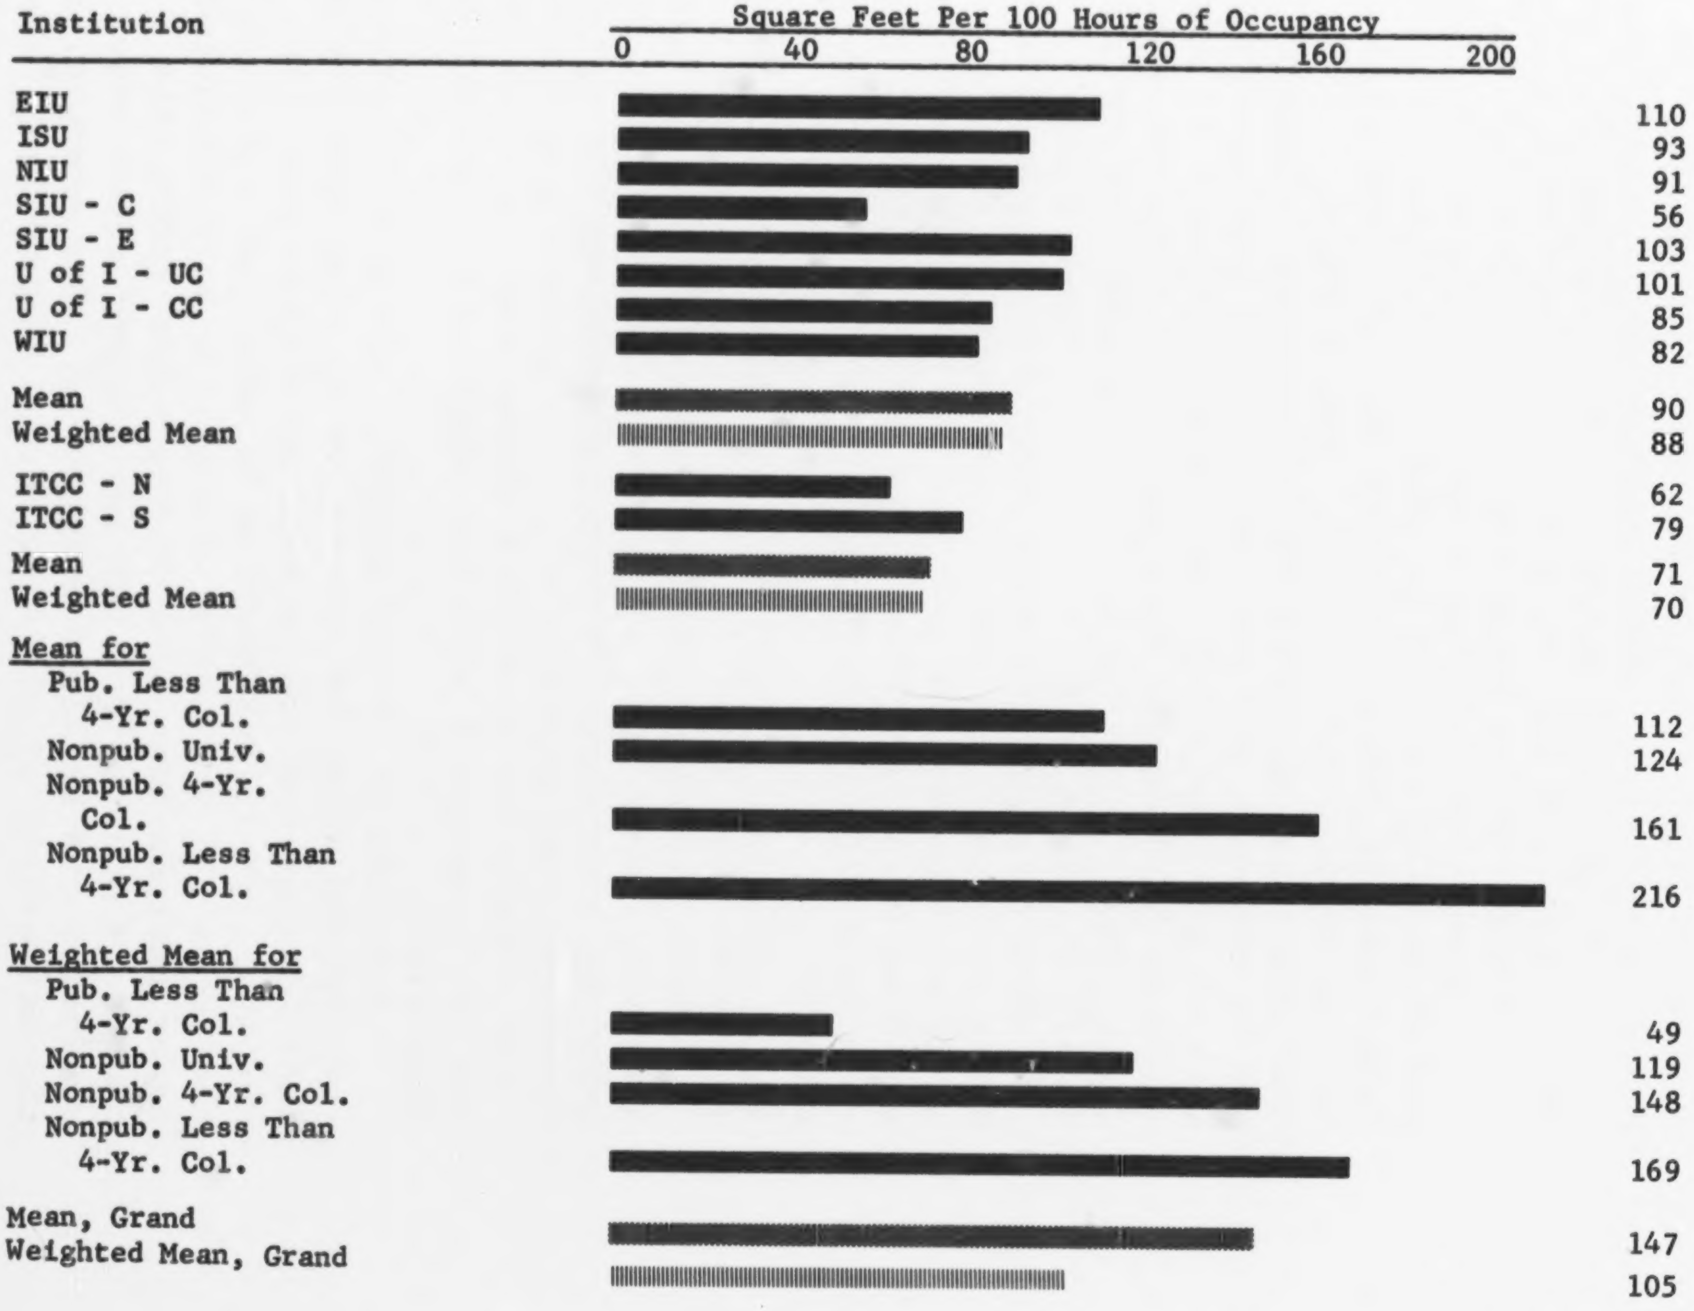
Figure 4. The Square Feet of Assignable Floor Space in Classrooms Per One Hundred Hours of Student Classroom Occupancy 7 A.M. - 10 P.M. at Institutions of Higher Education in the State of Illinois, September, 1965

(The lower the value, the more efficient is the utilization of space.)



student clock-hours and 105 for all participating institutions. More detailed information is given for all institutions in Schedule C5 of the Appendix. It should be noted that these data are for student occupancy 7 A.M. to 10 P.M. and thus should not be compared with the 110 square feet per 100 student clock-hours that is sometimes quoted for student occupancy from 7 A.M. to 5 P.M.

As mentioned previously, the value of square feet per student clock-hour is that it gives one number which represents an index including both the scheduled usage and the station utilization. For example, let us again consider the 600 square foot classroom. If this room had 36 stations and was scheduled 36 hours per week with 50 per cent of the stations utilized, the value would be 92.5 square feet per 100 student clock-hours.

$$\left(\frac{600}{(36 \times .5) \times 36} \times 100 \quad 92.5 \text{ feet per 100 student clock hours} \right)$$

However, if this same room were scheduled only 30 hours per week, but with 67 per cent of the stations utilized, the square feet per 100 student clock-hours would be 83.3 square feet per 100 student clock-hours -- a more effective utilization than the previous example.

$$\left(\frac{600}{(36 \times .67) \times 30} \times 100 \quad 83.3 \text{ feet per 100 student clock-hours} \right)$$

Data are also given in Table V on the net assignable floor space per 100 student clock-hours of occupancy by room size. Within institutions the values fluctuate over a relatively wide range, probably because classrooms have been constructed in sizes that are not compatible with the teaching program now being conducted.

Schedule C6 of the Appendix gives the average room period usage of classrooms by room size for all institutions and can be used in conjunction with Table V. It is interesting to note that although the rooms 251 and above in capacity were scheduled fewer periods than some of the other rooms, the number of square feet per 100 student clock-hours of occupancy can still be comparable. For example, at the University of Illinois (Urbana-Champaign), the rooms 251 and over were scheduled only 21.0 hours per week, and the rooms 21-30 were scheduled 29.6 hours per week. The number of square feet per 100 student clock-hours for the rooms 251 and over was 87, and for the rooms 21-30 the value was 92. This can be attributed to the smaller amount of space per station required in the large rooms; however, the stations in the larger rooms must be utilized at least to the same degree as those in the smaller rooms.

Schedule C7 of the Appendix gives the percentage distribution of class period meetings per week by class size for all participating institutions. The data are arranged to give an accumulated percentage for all classes. It is interesting to note that in almost all of the institutions, at least 80 per cent of the classroom instruction is conducted in class sizes of forty and under. Many institutions schedule an even greater percentage of their classroom instruction in classes of forty students or less. These data can be used by institutions to indicate clearly the classroom sizes required for their teaching program.

Graphical Representation of Classroom Data

A graphical representation of data in Table V and Schedule C7 of the Appendix is given for the public universities and teachers colleges in Figures 5 through 12. Graph A of each figure is presented to give an indication of the "fit" of the classroom size with the actual class size at the institution. The "Class Size" curve is obtained from the data in Schedule C7. By referring to the data for Eastern Illinois University as an example, one can see that 8.8 per cent of the classes are between one and ten in size and 33.2 per cent of the classes are in class sizes of one to twenty. The values are cumulative values. Thus, by reading the curve, one can determine that 72.8 per cent of the classes offered at Eastern Illinois University are of a class size of thirty and under. This curve ("Class Size") then represents the teaching program at the university and indicates that 72.8 per

Figure 12. Graphical Representation of Classroom Usage

cent of the classrooms constructed at Eastern Illinois University should be for a class size of thirty and under or should be easily convertible to areas which will accommodate up to thirty students.

The other curve, titled "Capacity," illustrates the distribution of the classrooms on the campus by capacity. In theory, if the geographical location of the classrooms on the campus were such that the time between classes presented no problem in going from one classroom to the other, and if it were possible to schedule all of the classrooms equally with the smaller classes in the small classrooms and if the classroom capacity were exactly filled each time the room was used, the two curves would appear as one. However, if the capacity of the classroom is generally greater than the actual class size, the "Capacity" curve will be shifted to the right. In the example of Eastern Illinois University, the "fit" is such that by the time all thirty size classes are scheduled, all thirty-five station classrooms will be used.

As mentioned before, a large gap between these two curves would normally suggest that more efficient classroom utilization could be effected by subdividing classrooms of larger capacity. However, additional investigations may be necessary to determine if the number of stations has been reported correctly. This is advisable because, if an institution has reported the classrooms as a given number of stations per room and then scheduled a larger number of students in that room at various times, the two curves would appear to be much closer.

Graph B is presented to reflect the degree of utilization of classrooms by size. It gives the number of square feet per student clock-hour of instruction for the various sizes of classrooms. These data are obtained from Table V and are shown as a point-to-point curve illustrating the usage for various room sizes. An extreme variation to the right of this curve indicates a poor usage of that group of rooms, and it may be well for the institution to determine if some alterations in size should be made to this group of rooms. The small triangular shaped marker at the top of the graph indicates the over-all net assignable square feet of classroom space including service areas per hour of student occupancy.

Instructional Laboratory Utilization

Table VI gives a summary of the total amount of space allocated to instructional laboratories, including service areas at each of the public universities and teachers colleges. Mean values for square feet per station are given for each type of institution. Mean and weighted mean values for square feet per student are also given for each type of institution. The weighted mean values for square feet per station are given for public universities and teachers colleges. More complete information for all institutions is given in Schedule D1 of the Appendix. The number of square feet per station at the public universities ranges from 46.6 to 84.7. The two public teachers colleges report 32.4 and 36.8. The number of square feet per student for the public universities ranges from 3.6 to 23.8. The figures are 2.1 and 3.6 for the two public teachers colleges. There does not appear to be a correlation between square feet per station and square feet per student, probably because of the varied types of programs at each institution. Figure 13 gives data on the average room period usage per week. Data are included for 7 A.M. to 5 P.M., 5 to 10 P.M. and 7 A.M. to 10 P.M. at the public universities and teachers colleges. Mean values are given for other types of institution. The average room period usage per week from 7 A.M. to 10 P.M. for the public universities varies from 10.3 to 24.4. Figures for the two public teachers colleges are 22.6 and 23.1. The weighted mean is 18.9 for public universities. More complete information for all participating institutions is given in Schedule D2 of the Appendix. Data relating to the average class size in instructional laboratories show a range from 17.1 to 22.1 at the public universities. The figures are 21.0 and 22.2 for the public teachers colleges. Figure 13 shows that Southern Illinois University (Edwardsville) conducts the greatest number of evening laboratory

sessions among the public universities.

It is apparent that instructional laboratories are not scheduled as heavily as classrooms. Since such space often has special equipment only for use by the department to which it is assigned, this could be expected.

Figure 14 gives the average number of student hours per week per station in instructional laboratories for public universities and teachers colleges. Mean values are given for other types of institutions. Data are presented for 7 A.M. to 5 P.M., 5 to 10 P.M., and 7 A.M. to 10 P.M. For the time period 7 A.M. to 10 P.M. the range is 8.9 to 20.0 for the public universities. The two public teachers colleges report figures of 17.6 and 21.2. Public universities show a mean of 14.9 and a weighted mean of 15.1.

Figure 15 shows the per cent of student stations in use for 7 A.M. to 5 P.M., 5 to 10 P.M., and 7 A.M. to 10 P.M. The range for the time period 7 A.M. to 10 P.M. is 70.4 to 88.2 per cent for the public universities, with a mean of 80.2 per cent and a weighted mean of 79.9 per cent. More detailed information for all participating institutions is presented in Schedules D3 and D4 of the Appendix. Station utilization, as expected, is higher in teaching laboratories than in classrooms. This is because teaching laboratories are designed for a given size section and usually these sections are filled before another section is opened.

Table VII gives the square feet of net assignable floor space per 100 hours of instructional laboratory occupancy. This figure assembles in one index both the scheduling and utilizing of the space when used as depicted in Figures 13, 14, and 15. The data indicate a mean and weighted mean of 456 and 461 square feet per 100 hours of student laboratory occupancy for the public universities. Data are presented for other types of institutions. More detailed information for all participating institutions is presented in Schedule D5 of the Appendix.

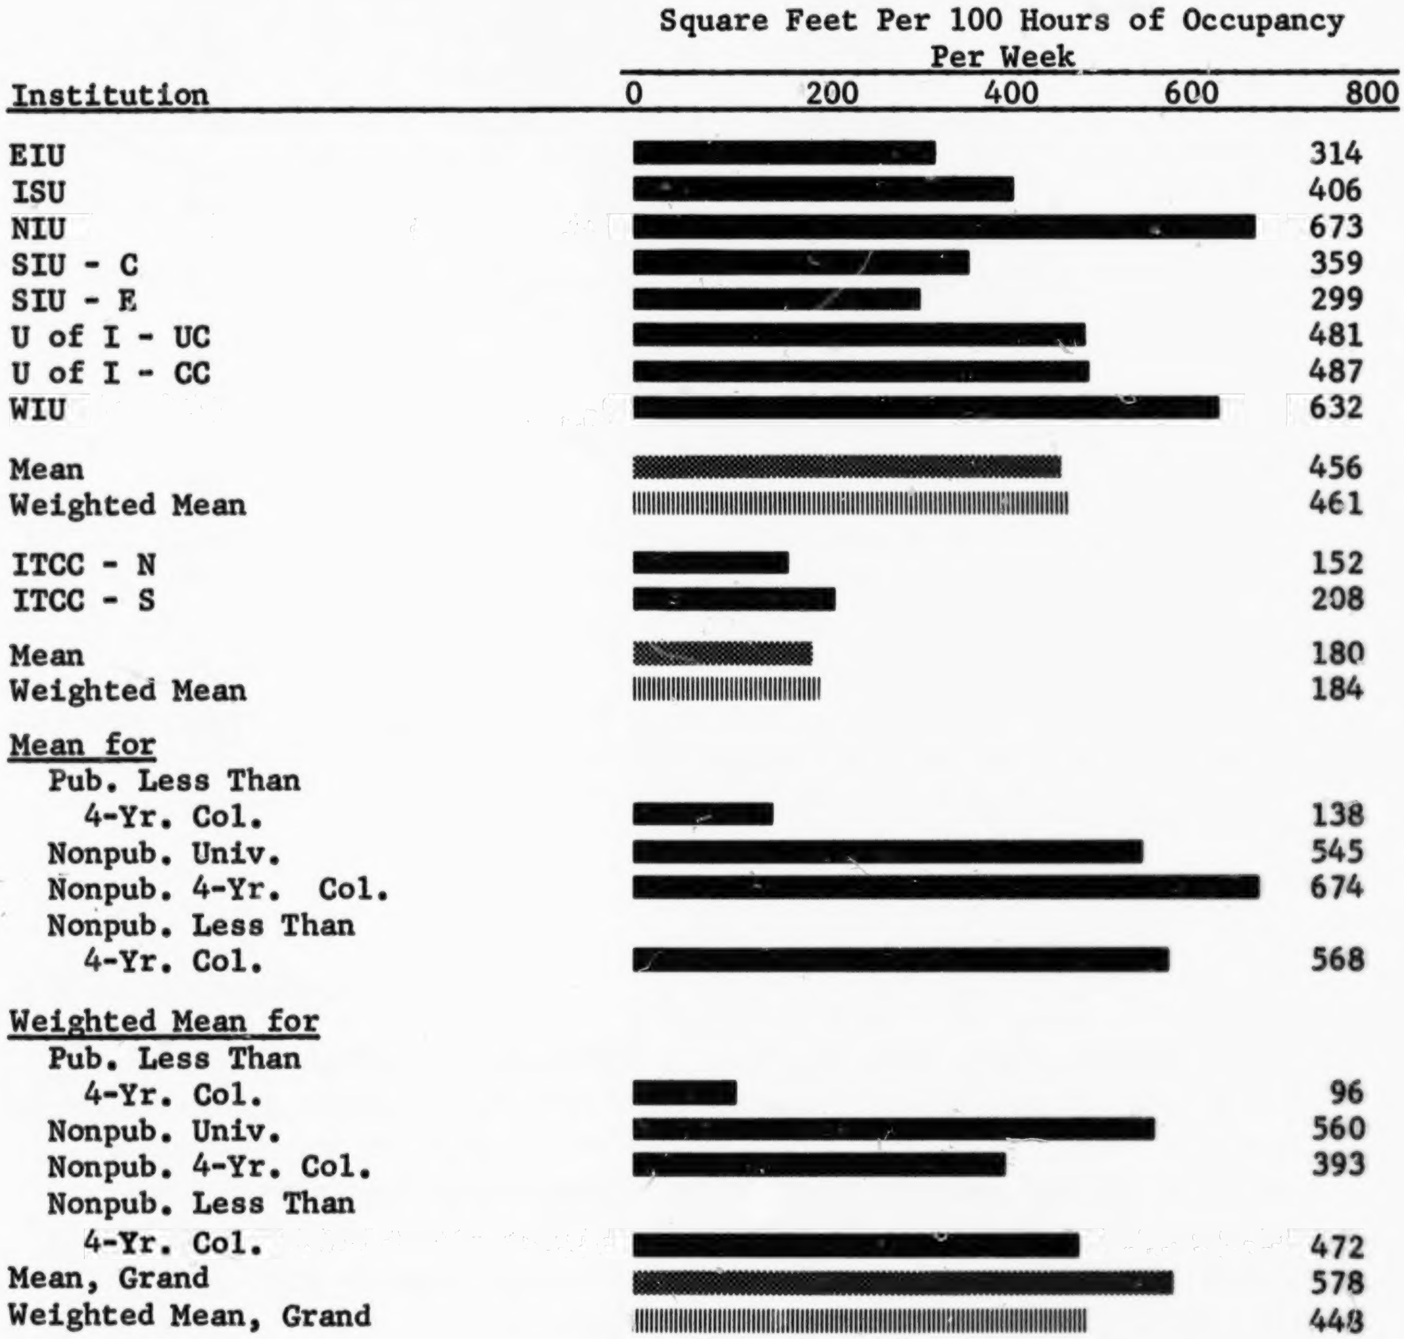
These data are very significant in that they indicate the number of square feet per 100 hours of occupancy now in use, and could be used as a figure to project future space requirements for teaching laboratories. Figure 16 gives in graphic form the same information as Table VII regarding assignable floor space per 100 hours of teaching laboratory occupancy.

Figure 16. Net Assignable Square Feet of Floor Space in Teaching Laboratories Per One Hundred Hours of Student Occupancy at Institutions of Higher Education in the State of Illinois, September, 1965

(The lower the value, the more efficient is the utilization of space.)



Nonetheless, program variations influence the type of laboratory space required. For example, a drafting room for freshman-sophomore work may require only 170 square feet per 100 student clock-hours of instruction, while a mechanical engineering power laboratory for junior-senior work may require as much as 1,000 square feet per 100 student clock-hours of instruction.

A report by Jamrich and Dahnke on "Ten Year Building needs for Higher Education in Ohio" recommends that present laboratory space (excluding auxiliary space) of 4.6 square feet per student be reduced to 4.0 by 1966 and to 3.0 by 1972. This method may be applicable to Illinois. However, the staff is in agreement with the Committee I recommendation that further study should be made of laboratory space requirements based upon subject field (engineering, biological sciences, physical sciences, humanities, etc.) and level of instruction (freshman-sophomore, junior-senior, and graduate) before adopting any such standards.

Utilization of Other Teaching Facilities

Table VIII gives a summary of the total amount of space at each of the public universities that is allocated to other teaching facilities. Mean values for square feet per station and square feet per student are given for each type of institution. Weighted mean values for square feet per student are given for each type of institution. More complete information is given for all participating institutions on Schedule E1 of the Appendix.

The number of square feet per station devoted to the other teaching facilities ranges from 22.8 to 370.0 for public universities, with a mean of 179.6 and a weighted mean of 151.6. The two teachers colleges report 94.3 and 195.9. The wide range at the public universities probably results from several factors including the variety of types of facilities included in the "other teaching facility" category, the variety of educational programs housed in "other teaching facilities," and a certain lack of consistency in reporting facilities to be included in this category. The number

of square feet per student at the public universities ranges from 2.7 to 15.3, with a mean of 10.5 and a weighted mean of 10.3. The public teachers colleges report 3.3 and 5.2. For all participating institutions the grand mean values are 186.3 square feet per station and 12.4 square feet per student.

Figure 17 gives data on the average room period usage per week in other teaching facilities. Data are given for 7 A.M. to 5 P.M., 5 to 10 P.M., and 7 A.M. to 10 P.M. The average room period usage of other teaching facilities at the public universities for the time period 7 A.M. to 10 P.M. ranges from 17.9 to 53.4, with a mean of 34.0 and a weighted mean of 39.9. The two public teachers colleges report 14.8 and 16.5. The grand mean for all institutions is 25.1. More complete information for all participating institutions is presented in Schedule E2 of the Appendix.

Table IX gives the square feet of net assignable floor space per 100 hours occupancy in other teaching facilities. The data indicate a mean of 974 and a weighted mean of 835 square feet per 100 hours of occupancy for the public universities. The two public teachers colleges report 738 and 1,018. The weighted mean is 952 square feet for all participating institutions. More complete information for all institutions is presented in Schedule E3 of the Appendix. Mean values may be distorted by the inclusion of drill halls, indoor tracks, swimming pools, etc., and further investigation may be needed when projecting space requirements for other teaching facilities.

Utilization of Office Space

Office space is an extremely significant part of the space needs of colleges and universities, and often the requirements are greater than is realized. This is particularly true when a high degree of utilization of classroom and laboratory space is obtained and/or when research programs reach an advanced level. Table X gives a summary of the total office space (including conference, file, and active storage space), the number of FTE occupants requiring office space, and the net

Table XI summarizes the office area, including conference, file, and storage space, occupied by faculty personnel. Data relating to total net assignable square feet, total FTE occupants, and net assignable square feet per FTE occupant are provided. The number of square feet per FTE occupant is significant as a measure of utilization. For the public universities the mean is 110.4 square feet per occupant and the weighted mean is 115.7. The two public teachers colleges reported 53.9 and 96.3. The mean for all participating institutions is 119.7

Table XII summarizes the office area, including conference, file, and storage space, occupied by persons assigned research functions. Data relating to total net assignable square feet, total FTE occupants, and net

Utilization of Library Space

Schedule G of the Appendix gives a summary of the library space at each participating institution by functional category. The categories included are stack and service area, reading and study area, and carrel area. Data relating to the number of bound volumes and the number of periodicals are also provided. Table XIV gives the total area assigned to library functions and the per cent of all space which this amount represents. Data are provided for the public universities and public teachers colleges. Mean values are also shown for various types of institutions. The per cent of space assigned to library functions at the public universities ranges from 5.8 to 16.3 with a mean of 9.1.

TABLE XIV

Capacity/Enrollment Ratio

The capacity/enrollment ratio is gaining recognition as a measure of the utilization of academic facilities. As used in this report, the capacity/enrollment ratio refers to the number of net assignable square feet of instructional and library space per 100 student clock-hours. As indicated in the definition of terms section of this report, the instructional and library space category includes classrooms, teaching laboratories, other teaching facilities, faculty offices, and library space.

Although the capacity/enrollment ratio has proven quite useful, it has certain limitations. These limitations can be partially overcome by careful interpretation of data relating to capacity/enrollment ratios and by the use of extreme caution when comparing data from institutions of a dissimilar nature. Before studying Table XVII, the following limitations of the capacity/enrollment ratio as herein reported should be noted: (1) no provision is made for level of student; (2) no provision is made for program characteristics; (3) no provision is made for noncredit instruction; and (4) no provision is made for activity of a noninstructional nature (even though such activity may be considered a basic function of the institution).

Recent attempts to develop scales based upon the nature of the institution represent an effort to increase the value of the capacity/enrollment ratio. It is hoped that additional research in this direction will be forthcoming. Table XVII presents the capacity/enrollment ratio for all public universities and teachers colleges. Mean values are also given for other types of institutions. More complete information for all participating institutions is provided in Schedule Bl of the Appendix.

Gymnasium Space Not Used for Instruction

The net assignable square feet, seating capacity, net assignable square feet per student, and seating capacity per student are given in Schedule J of the Appendix.

TABLE XVII

Student Union, Lounge, and Bookstore Space

The provision of space for student unions, lounges, and bookstore space is relatively new in colleges and universities. Ordinarily, construction costs come from non-tax funds. Schedule K of the Appendix gives the dining and student area in net assignable square feet, the net assignable area and number of guest rooms, the total net assignable square feet, and the net assignable square feet per student.

Hospital and Health Service Facilities

Hospital and health service space varies considerably from institution to institution. In the public universities the method of paying for such facilities varies from construction entirely by state appropriation to construction entirely from student fees.

Schedule L of the Appendix reports the hospital bed area in net assignable square feet, the number of bed spaces, the net assignable square feet for health service, the net assignable square feet of staff living quarters, the total net assignable square feet, and the net assignable square feet per student.

Auditorium, Theater, and Museum Space Not Used for Instruction

The net assignable square feet, seating capacity, net assignable square feet per student, and seating capacity per student are given in Schedule H of the Appendix.

Distribution of Room Period Usage for Classrooms and Instructional Laboratories

Schedule S of the Appendix contains the distribution of room period usage for classrooms and instructional laboratories by time of day and day of week at the public universities and public teachers colleges. The nature of this distribution is an important factor affecting the utilization of classrooms and laboratories. A careful study of current usage often yields information regarding time periods during which classrooms and laboratories could be utilized more effectively.

Many institutions are currently experimenting with unique scheduling methods in an effort to obtain a more balanced usage of classrooms and instructional laboratories. Administrators of both private and public institutions are encouraged to study data which they submitted on Schedules 16A and 16B of the survey forms for this study in an effort to devise more effective scheduling procedures.

Service and Maintenance Space for Buildings and Grounds

The total net assignable square feet, net assignable square feet per student, net assignable square feet of service shops, net assignable square feet of storeroom space, net assignable square feet of warehouse space and net assignable square feet of garage space are given in Schedule M of the Appendix.

SECTION III

PROGRESS TOWARD RECOMMENDED STANDARDS OF CLASSROOM, LABORATORY, AND OFFICE UTILIZATION

As a result of a study conducted during the 1962-63 academic year, Master Plan Committee I recommended interim standards of utilization for classrooms, laboratories, and offices. The committee recommended that the interim standards be carefully studied as data are obtained from additional space utilization studies and that permanent standards be developed.

Classroom Utilization

It is believed that the best index for classroom utilization is the number of square feet per 100 student clock-hours of occupancy per week. However, the more common methods of reporting classroom utilization, i.e., the average room period usage per week and the per cent station utilization when the classrooms are scheduled were incorporated into the recommended standard. Committee I recommended that the standard for classroom utilization between the hours of 7 A.M. and 5 P.M. be 30 hours per week average room period usage and a station utilization of 60 per cent which would give 83.3 square feet per 100 student clock-hours of occupancy per week. It was suggested that institutions unable to attain 60 per cent utilization can obtain the same effect by more intensive scheduling.

During the period from 1962 to 1965, average room period usage 7 A.M. to 5 P.M. at the public universities has decreased from 28.3 to 26.8. It has increased at the public teachers colleges from 25.3 to 28.4. On the other hand, the per cent of station utilization 7 A.M. to 5 P.M. has increased at the public universities from 56.0 to 57.3. The public teachers colleges have increased the per cent of station utilization from 44.6 to 57.9.

The utilization of classrooms as measured by the total number of net assignable square feet per 100 student clock-hours of occupancy 7 A.M. to 10 P.M. has decreased since data for the Committee I report were obtained. The figure for public universities increased (decreased utilization) from 86 square feet to 88 square feet. For nonpublic universities, the increase (decreased utilization) was from 95 square feet to 119 square feet. The public teachers colleges showed an increase in utilization of classrooms with a figure of 70 square feet for 1965. For all participating institutions, figures are 95 square feet for 1962 and 105 square feet for 1965.

Table XVIII presents a tabulation of the possibilities of increasing classroom utilization through increased daytime and evening scheduling. For example, the present usage of the public universities in Illinois from 7 A.M. to 5 P.M. is 26.8 hours per week and 57.3 per cent station utilization. This is 96 square feet per 100 student clock-hours of occupancy and reflects the same level of utilization as reported by the public universities in 1962. The total usage from 7 A.M. to 10 P.M. is 29.7 hours per week with a 56.4 per cent station utilization giving a value of 88 square feet per 100 student clock-hours of occupancy. It can be observed that 26.8 hours of scheduling and 57.3 per cent station utilization do not give the same degree of utilization as a standard of 30 hours per week with 60 per cent station utilization. The former requires 96 square feet per 100 student clock-hours of

TABLE XVIII

Possibilities of Increased Classroom Utilization at Illinois State Universities with Additional Daytime and Evening Scheduling

	Average Room Period Scheduling Per Week	Per Cent Station Utilization	Sq. Ft. Per 100 Student Clock-hours Occupancy
Present usage 7 a.m.-5 p.m.	26.8	57.3	96.0
Total usage 7 a.m.-10 p.m.	29.7	56.4	88.0
Recommended Standard 7 a.m.-5 p.m.	30.0	60.0	83.3
Increase with proposed standard of 30 hours per week scheduling and 60 per cent station utilization plus evening scheduling of			
2.5 hours per week	32.5	60.0	76.9
5.0 hours per week	35.0	60.0	71.4
7.5 hours per week	37.5	60.0	66.6
10.0 hours per week	40.0	60.0	62.5
12.5 hours per week	52.5	60.0	58.8
13.5 hours per week	54.5[a]	60.0	57.6
Increase with 30 hours per week scheduling and 56 percent station utilization			
2.5 hours per week	32.5	56.0	82.4
5.0 hours per week	35.0	56.0	76.5
7.5 hours per week	37.5	56.0	71.4
10.0 hours per week	40.0	56.0	66.9
12.5 hours per week	42.5	56.0	63.0
13.5 hours per week	43.5[a]	56.0	61.7

a. Same intensity of scheduling in evening as daytime.

occupancy whereas the latter gives a value of 83.3 square feet per 100 student clock-hours of occupancy.

The remainder of Table XVIII shows the possibilities of increased utilization of classrooms that may be obtained by additional scheduling during the evening. Such evening scheduling represents an important source of increased enrollment capacity. It is interesting to note from these data that the effect of a 4 per cent decrease in station utilization will require almost 2.5 hours per week more scheduling to be equivalent in utilization. For example, 32.5 hours per week at 60 per cent station utilization would give a value of 76.9 square feet per 100 student clock-hours of occupancy and thirty-five hours per week at 56 per cent station utilization would give a value of 76.5 square feet per 100 student clock-hours of occupancy.

Laboratory Utilization

Committee I recommended a standard for the utilization of instructional laboratories of 20 hours per week average room period usage and 80 per cent station utilization, which would give 425 square feet per 100 student clock-hours of occupancy. The present usage at the public universities in Illinois from 7 A.M. to 5 P.M. is 17.8 hours per week and 80.4 per cent station utilization. This is 486 square feet per 100 student clock-hours of occupancy. The total usage from 7 A.M. to 10 P.M. is 18.9 hours per week with a 79.9 per cent station utilization, giving a value of 461 square feet per 100 student clock-hours of occupancy.

During the period from 1962 to 1965, the average room period usage from 7 A.M. to 5 P.M. at public universities decreased from 20.2 to 17.8. The average room period usage decreased at public teachers colleges from 22.9 to 19.3. The per cent of station utilization increased from 75.4 to 80.4 at the public universities. The public teachers colleges report an increase from 73.4 to 90.9 percent.

The utilization of instructional laboratories, as measured by the total number of net assignable square feet per 100 student clock-hours from 7 A.M. to 10 P.M., has decreased during the period from 1962 to 1965. The number of square feet per 100 student clock-hours increased (decreased utilization) at the public universities from 412 to 461 square feet. The increase (decreased utilization) at nonpublic universities was from 466 to 560 square feet. The increase was from 171 to 184 square feet for public teachers colleges. For all participating institutions, the figures are 353 square feet for 1962 and 448 square feet for 1965.

Table XIX presents the possibilities of increased utilization of instructional laboratories with additional daytime and evening scheduling. The present usage for public universities gives values of 486 (7 A.M. to 5 P.M.) and 461 (7 A.M. to 10 P.M.) square feet per 100 student clock-hours of occupancy. Both

TABLE XIX

Possibilities of Increased Teaching Laboratory Utilization at Illinois State Universities with Additional Daytime and Evening Scheduling

	Average Room Period Scheduling Per Week	Per Cent Station Utilization	Sq. Ft. Per 100 Student Clock-hours Occupancy
Present usage 7 a.m.-5 p.m.	17.8	80.4	486
Total usage 7 a.m.-10 p.m.	18.9	79.9	461
Recommended Standard 7 a.m.-5 p.m.	20.0	80.0	425(by 1970)
	24.0	80.0	354(by 1975)
Increase with proposed standard of 20 hours per week scheduling and 80 per cent station utilization plus evening scheduling of			
2.5 hours per week	22.5	80.0	377
5.0 hours per week	25.0	80.0	340
7.5 hours per week	27.5	80.0	309
9.0 hours per week	29.0[a]	80.0	293
10.0 hours per week	30.0	80.0	283
12.5 hours per week	32.5	80.0	262
15.0 hours per week	35.0[b]	80.0	243

a. Same intensity of scheduling in evening as daytime for 1970 proposed standard.

b. Same intensity of scheduling in evening as daytime for 1975 proposed standard.

figures reflect a decrease in utilization since 1962. The remainder of the table indicates the increased utilization that may be obtained by additional scheduling in the evening at 80 per cent station utilization.

An examination of the tables showing the actual and possible classroom and instructional laboratory utilization indicates that it is possible to increase the utilization for both types of facilities.

Utilization of Office Space

An interim standard of 135 square feet per FTE staff or faculty member requiring office space was recommended by Committee I. The 135 square feet value includes offices, conference rooms, reception areas, files, and storage areas. The mean for public universities is 129.0 square feet per FTE occupant which is within the recommended standard. The nonpublic universities report a mean of 126.8, and the public teachers colleges report a mean of 104.3. The fact that institutions apparently have greater difficulty in achieving the standards for classroom and laboratory utilization than in achieving the standard for office utilization is of interest.

SECTION IV

RECOMMENDATIONS

The dangers inherent in efforts to generalize from data relating to space utilization were stated previously. It is not the function of this report to make specific recommendations to individual institutions. However, certain recommendations appear to be consistent with data obtained by the "State-Wide Space Survey" as well as with apparent requirements of the coming decade.

I. It seems apparent that the utilization of physical facilities by Illinois institutions of higher education can be improved. In view of the heavy burden soon to be placed upon all institutions within the state by increasing enrollments, the achievement of improved utilization becomes one of the more important tasks facing higher education. One of the first steps in achieving and retaining improved utilization is the development of procedures for gathering and processing the wealth of data required for an accurate measure of the amount and utilization of available space. Experience shows that detailed and comprehensive study of physical facilities is undertaken too infrequently by many institutions of higher education. Institutions must often depend upon inexperienced personnel and must rely upon data which have long since become obsolete and inaccurate. Many persons knowledgeable in the field believe that it is more realistic to update space utilization studies each year than to attempt completely new studies at intervals of three to five years.

For the reasons mentioned above it is recommended that public institutions of higher education update both inventory and utilization data through participation in an annual "State-Wide Space Survey" beginning with the 1967-68 academic year. It is further recommended that every effort be made to bring the methodology and terminology incorporated into the "State-Wide Space Survey" into congruence with national studies and data-gathering systems. Every effort should be made to coordinate the efforts of institutions within the state with those of institutions in other states insofar as the study of physical facilities is concerned. Serious consideration should be given to the facilities utilization project currently being undertaken by the Committee on Facilities Utilization of the American Association of Collegiate Registrars and Admissions Officers in conjunction with other state and federal agencies. If feasible, future "State-Wide Space Surveys" should use definitions and procedures established by this study in an effort to obtain data which are compatible with national data.

It is further recommended that nonpublic institutions of higher education be invited to participate in the "State-Wide Space Survey" on alternate years beginning with the 1967-68 academic year. Continued participation in studies of this type by institutions of higher education will, over a period of years, yield significant returns on the investment.

II. It is recommended that public institutions increase their efforts to achieve the standards for classroom and laboratory utilization recommended by Committee I of the Master Plan study. It would appear that nonpublic institutions should also make an intensive effort to improve the level at which they utilize physical facilities.

Specific techniques which prove effective for the improvement of utilization vary from one institution to another. However, studies conducted in the past have produced certain suggestions which appear relevant when data contained in this report are considered. In general, the suggestions fall into three groups: (1) the achievement of improved utilization of existing facilities; (2) the remodeling and rehabilitation of facilities with consideration given to methods of obtaining more efficient utilization; and (3) more effective design and construction of physical facilities.

Achievement of Improved Utilization of Existing Facilities

Certain revisions of class and/or room scheduling procedures are often cited as possible avenues to improved utilization of facilities. The advantages of a particular technique or combination of techniques must be carefully weighed against possible disadvantages by the administration of individual institutions. Several techniques appear to be worthy of consideration by institutions in Illinois.

1. The scheduling of instructional facilities by a central office or agency rather than by the various departments is one method of improving utilization. The proprietary feeling which academic departments often develop toward physical facilities is a major cause of wasted space. Several advantages, including the clear delineation of responsibility, may be obtained by the use of a central agency for the assignment of classrooms or even of all instructional facilities.
2. The use of institutional policies which require departmental scheduling of classes in such a manner as to utilize facilities more fully during hours traditionally considered less desirable is suggested where departmental scheduling is a part of the organizational structure.
3. The practice of scheduling more students in evening classes often results in the more intensive use of physical facilities. It appears that this technique could be more fully utilized in Illinois.
4. Staggering lunch periods and other regularly scheduled student activities can produce improved utilization.
5. A careful study of the use of classrooms and laboratories being utilized at a relatively low level because of limitations imposed by a lack of equipment or the use of outmoded equipment may prove useful.

In many cases, the purchase of additional equipment can provide a much needed increase in departmental or institutional enrollment capacity with little or no additional construction required. It is sometimes possible to increase the capacity of a room significantly by the simple replacement of outdated furniture and equipment.

6. The use of larger classes in some institutions and the assignment of classes to rooms with a capacity more nearly equal to the enrollment of the class represent potential techniques for improving the level of utilization. The significance of class and classroom "fit" is sometimes overlooked in the assignment of classrooms, laboratories, and other teaching facilities.

7. The use of electronic equipment for registration and scheduling procedures is recommended by some educational administrators as a means of improving utilization.

The Remodeling and Rehabilitation of Facilities with Consideration Given to Methods of Obtaining More Effective Utilization

The remodeling and rehabilitation of existing facilities often result in the more effective utilization of facilities. Data contained in Schedule C7 give administrators an insight into the size of classrooms required by the educational program of their institution. It is often possible to obtain such facilities by remodeling less desirable space at a cost substantially below the cost of new construction.

Careful study of the various schedules in the Appendix may also prove of value in allocating funds available for remodeling and rehabilitation in such a way as to provide space of the type most urgently needed by the institution.

Effective Design and Construction of Physical Facilities

Added potential for high utilization can often be designed and built into physical facilities. Data relating to average class size, distribution of classes in terms of size of enrollment, current room period usage, current station utilization, and recommended standards of utilization are useful in the planning and construction of new buildings. If such data are utilized, the number of costly errors concerning the type of facilities needed, optimum capacity of new instructional facilities, and priority of needed facilities can be reduced. During recent years experts have placed considerable stress on the value of constructing rooms that can be easily modified. Classrooms and laboratories are being designed so that they may be used for instruction in several disciplines. This is particularly true of related disciplines such as the sciences, foreign languages, etc. Many institutions have experienced considerable savings through the design and construction of facilities which are easily and inexpensively modified as requirements of the educational program undergo change. It is hoped that data contained in this study will provide insights into certain relationships which are important in the translation of the educational program into functional physical facilities offering optimum potential for effective utilization.

III. It is recommended that an ad hoc committee be established for the purpose of conducting a continuous study of physical facilities at the public institutions of higher education. The committee should include representatives of each segment of public higher education in Illinois. The stated goals and purposes should be comprehensive and flexible in order to allow a substantial amount of discretion on the part of the committee. However, one goal should be to recommend a range of standards for the construction and utilization of physical facilities at public institutions of higher education.
